

IN THE CLAIMS:

The following is a listing of the claims in the subject application with claims 6 and 8 shown as amended.

LISTING OF CLAIMS

Claims 1-5 (cancelled)

Claim 6 (currently amended) A method for accessing a computer having a CPU with information processing capability and memory for forming and storing data files of business and/or personal information located at a first location to view, create, modify and/or transfer information to and from the stored data files in said computer by an operator located at a second location remote from said first location with the second location being absent a computer with a CPU and/or information processing capability to create and/or store data files but having available at said second location means for communicating with the internet including a wireless communicating device, a video monitor, browser and keyboard processor unit and having a keyboard and an ASCII encoder and decoder for receiving and transmitting ASCII data comprising the steps of: using the wireless communicating device to establish a wireless interconnection through the internet via said browser for communicating between the keyboard processing unit at the second location and the remotely located computer at the first location and using the keyboard in conjunction with the video monitor at the second location to access information from the computer at the first location for display on said video monitor at the second

location and to use the keyboard in conjunction with the video monitor to modify information stored in existing files in the remotely located computer and/or create new data files in said computer.

Claim 7- (as previously amended) A method as defined in claim 6 wherein said video monitor is a TV and wherein an RF modulator and an RF transmitter is used to transmit and receive information wirelessly between the keyboard processing unit and the TV video monitor.

Claim 8 (currently amended) A method for accessing a computer having a CPU and information processing capability and memory for forming and storing data files of business and/or personal information located at a first location to view, create, modify and/or transfer information to and from such computer by an operator located at a second location remote from said first location using at the second location a video monitor, a modem, means for communicating with the internet including a browser for accessing the internet and a keyboard processor unit having a keyboard and an ASCII encoder and decoder for receiving and transmitting ASCII data but without the availability at the second location of another computer with a CPU having information processing capability and memory to form and store data files and having a wireless cellular telephone communicating device at said second location for connecting said keyboard processing unit to the internet via said modem comprising the steps of: using the cellular telephone to establish a wireless interconnection through the internet for communicating between the keyboard

D-SHO-2000-4

processing unit and the computer and using the keyboard in conjunction with the video monitor at the second location to access information from the computer at the first location for display on said video monitor at the second location and to use the keyboard in conjunction with the video monitor to modify information stored in existing files in the computer at the first location and/or create new data files in the computer in the first location.

Claim 9 (original) A method as defined in claim 8 wherein said video monitor is a TV and wherein an RF modulator and an RF transmitter is used to transmit and receive information wirelessly between the keyboard processing unit and the TV video monitor.
